

# Separate Liquids from Solids for Easy Recycling—Automatically

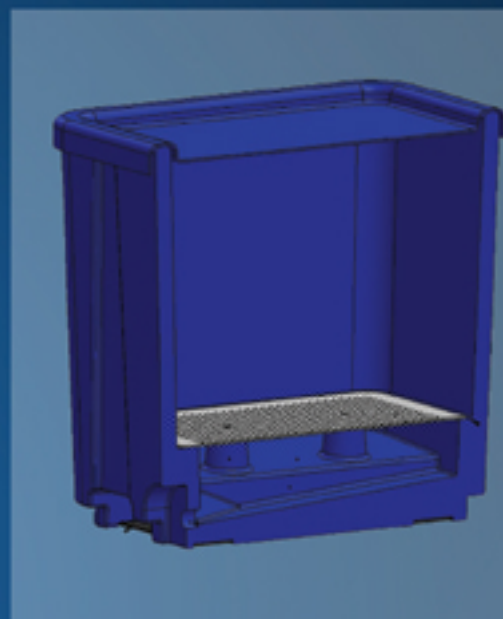

**New!**

## Material Recovery Station

The new Material Recovery Station automatically separates liquids from solids so both can be collected and more quickly and easily processed for recycling or for sale as highly marketable scrap. Just place your metal waste chips, plastic material, glass and rubber, and swarf of all kinds inside. As it accumulates, our proprietary screening panel inside separates the solids while liquids are safely contained in the bottom until ready to be drained.

When it's full, the entire Material Recovery Station may be lifted by forklift, emptied and returned to service or covered and hauled away as part of a returnable, loop system.

Capacity	
Total Capacity	30 Cu. Ft.
Capacity under screen	20 gallons
Dimensions	
With Lid	45.5" x 45.5" x 44.25"
Without Lid	44" x 44" x 44"
